

► nAccess – Digital Key

Multi-standard solutions: CCC/ICCE/ICCOA for different markets.

► Technical Details

- Support popular SOCs: NXP, Newradio, etc
- Support UWB+BLE+NFC digital key solution, suitable for private, ICCE, CCC protocol, support mobile phone as the key
- Support integration Kick Radar , Living Radar, etc., can be further expanded to support multi-mode interaction, field positioning and other future scenarios
- Support cloud, car, key, mobile software and hardware solutions
- The software algorithm supports multi-source data location filtering and multi-anchor intelligent collaboration to provide dynamic optimal selection
- Support 1-3 anchor points to cover all customer need

► Features

- **Cost-effective solution**
 - Integrate the TBOX solution to reuse both software and hardware
 - Anchors can be reused in Kick Radar , Living Radar, etc.,
 - The new platform-based solution can reduce anchors by more than 50%
- **Full-stack services**
 - A variety of combination solutions and distributed algorithms can meet the needs of different customers and bring a better user experience
 - Support cloud, car, mobile phone, key and other multi-terminal solutions, to provide convenient and complete product services

► Application

- Support integrate various sensing system, meeting OEM's customized requirements
- UWB based CPD solution nominated by Japanese JV OEM, first SOP in the end of 2024
